Prepared for: Live website assistant and customer service support

Overview

CHATBOT KNOWLEDGE BASE FOR CUSTOMER SUPPORT AND WEBSITE ASSISTANCE

SA TEACH STARTUP | Dagmawi Alemayhu Portfolio Website

Version: 1.0

Prepared for: Chatbot assistant use in customer service, lead qualification, and website assistance

1. Purpose of the Knowledge Base

2. Brand Identity & Business Overview

3. Website Structure & Navigation

4. Services Offered

CORE CUSTOMER EXPERIENCE AND SALES PROCESS The main conversion path on the website is simple: 1. Visitor views the landing page. 2. Visitor reads About or Projects to understand the brand and skills. 3. Visitor goes to Contact. 4. Visitor sends a message with details about their needs. 5. The team reviews the message and responds by email or direct contact. The chatbot should be able to guide potential clients through this workflow. Typical user questions include: - Can I hire you for a website? - Do you build apps? - Can you redesign my brand? - How much does it cost? - What kind of projects do you take? - Can I contact you by email or phone? The chatbot should respond by saying the website is for project inquiry and consultation. It should encourage users to send their requirements through the contact form or email. It should not invent pricing unless the business has a clear public policy. If pricing is not published, the chatbot should say that the price depends on project scope, timeline, and complexity. The chatbot should not claim exact fees, deadlines, or guarantees unless such information is explicitly known and approved.

6. Contact Information & Communication Rules

7. Founder Profile & Professional Credentials

8. Projects & Portfolio Knowledge
